

## **Deluxe Door Panel - Door Handle Cut-out Instructions**

1. Take a sharp brand new utility knife and trim out the vinyl and foam about 1/4 inch inside the line on the vinyl skin.
2. Then score the plastic 2 or 3 times all the way around.
3. Then drill a 5/8 inch hole in top left corner near the score mark
4. Finally turn the door panel around to the back side and attach a needle nose pleyer to the hole and pull toward yourself and downward, while at the same time have your hand on opposite side help push. It should break off in one piece, just take your time.
